

Monitoring student movements Guaranteeing peace of mind

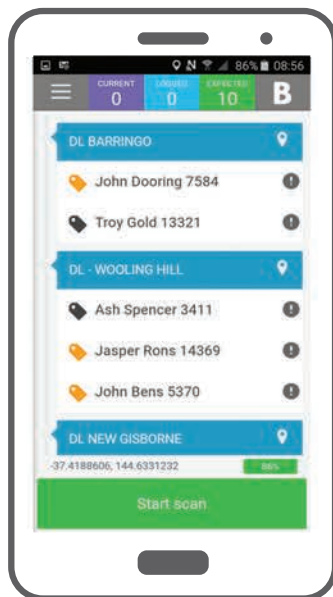

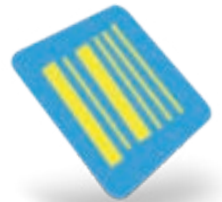

- 📍 Safe & Secure
- 📍 Emergency Alerts
- 📍 NFC & GPS Technology
- 📍 Bus Route Management
- 📍 Invaluable for School Excursions
Tours & Sporting Events

Introducing RollCall

In today's litigious world the safety and wellbeing of students is at the forefront of the development of all school policy and procedures.

RollCall is a revolutionary new online system designed with the safety of children at its heart. We have harnessed the latest technology to manage the movements of children on and off buses during daily commutes and school excursions.

Safety is delivered through visibility, and visibility is what we deliver to parents, school staff and bus drivers. Everyone who has a shared interest in the safety of this most precious cargo will have peace of mind.

An easy-to-use interface

No more battling with clipboards and pages of lists in howling winds and rain. Simply logon to the RollCall App and start scanning.

With a simple tap or scan Student location data is captured, time stamped and displayed on a RollCall enabled mobile device held by the teacher in charge, bus driver or carer.

Captured data is then instantaneously viewable on a school's Internet enabled PCs or mobile devices giving Administrators and Teachers total visibility, whether in the office or in the field.

With access to this live data, accurate Load Management is finally a reality. Too many students checked onto a bus? Someone left at a bus route stop? You will now be aware in real time and able to take appropriate remedial action.

NFC & Barcode

Captured in real time on Android phones and utilising Near Field Communication (NFC) technology or barcode scanning this is more than a record keeping system. RollCall substantiates your Duty of Care

Live Alerts

This is a dynamic system built with student safety in mind. Live alerts can be sent to parents as required, notifying them when and where their children get on or off the bus.

Realtime Visibility

Student movement data captured on the RollCall device is immediately displayed on the school's devices i.e PCs, Tablets, Mobiles. Bus over capacity, Student not on bus, Student on wrong bus, and more, are colour coded alarms demanding action.

Multiple uses

Regular School Travel

A live view of who is travelling on your regular bus network and when and where they got on or off is crucial information on today's education landscape.

RollCall places this information, and the historical data, at the school's fingertips saving time, money and unnecessary anxiety.

Emergency Situations

Has one of your buses ever been involved in an incident that required the attendance of Emergency Services? RollCall has an "Emergency Services" button built into the application. Click it, enter the email addresses of the Police, Fire or which ever service requires the information and they will receive a manifest showing the latest head count of passengers, and their names, in seconds.

Excursions

How many times have you done a physical student head count, come up short, and not known who is missing? RollCall not only tells you instantaneously how many children have tapped on but displays the names of any children not accounted for. RollCalls can be set for predetermined locations or taken randomly at any time that a teacher or carer feels a headcount is necessary.

Sporting Events

Have all the children completed the cross country running event? Is everybody accounted for before we commence the next sector of the bush walk? These concerns are no longer an issue when RollCall is being used.

Map Movements

Using reverse geocoding RollCall not only displays and records the time of each check on, check off or RollCall event, but also displays the mapped location anywhere in the world.

Parents Portal

Our Parent Portal provides each family with a secure, password protected method of obtaining school approval for a change of bus route whether temporary or permanent, notifying absenteeism, and selecting at which milestone event parents require a RollCall notification.

Emergency Mode

Emergency services buttons on the software application allow the schools to instantaneously send a copy of the live manifest to Emergency Services in the case of an incident.
